River TALC: Toxics Assessment of the Lower Columbia Testing for Roadway Runoff Chemicals

North Coast Watershed Association Kelli Daffron

Objectives

• Data gaps

 First sampling for some Chemicals of Emerging Concern (CECs) in our area

- Educational gaps
 - Outreach and education on water contamination in general in the Lower Columbia

- Partnerships with/support from:
 - Environmental Protection Agency
 - Center for Urban Waters at University of Washington, Tacoma
 - Clatsop Community College
 - Clatsop County
 - Lower Columbia Estuary Partnership

Targeted Chemicals in River TALC

Vehicle-related chemicals

Pharmaceuticals	s and personal	care prod	ucts (PPCP)
-----------------	----------------	-----------	-------------

(+)Caffeine
(+)Cetirizine
(+)Cotinine
(+)DEET
(*)Diclofenac
(*)Ibuprofen
(+)Metformin
^(*) Triclosan
Industrial/Commercial chemicals
⁽⁺⁾ 1,3-Dicyclohexylurea
(*)Bisphenol A
(*)Caprolactam
^(*) 4-Nonylphenol
^(*) 4-tert-Octylphenol
Substituted diphenylamine antioxidants & benzotriazole UV stabilizers
(SDPA & BZT-UV)
(+)SDPA-diAMS
(+)SDPA-C4C8
(+)SDPA-C8C8
(+)SDPA-C9C9
⁽⁺⁾ BTZ & UV-234
⁽⁺⁾ BTZ & UV-326

Sites

- 10 sites on 6 systems
 - Big Creek
 - Bear Creek
 - Columbia River
 - Klaskanine River
 - Lewis & Clark River
 - Skipanon River
- 2 major roadways
 - Hwy 101
 - Hwy 30
- 2 minor roadways
 - Hwy 202
 - Lewis & Clark Road

Sampling

- 3 antecedent dry days
- 3mm of rain within an hour
- Overnight iced samples to Tacoma
- Lots of difficulty getting to sites when conditions are right . . .
- Great volunteers are helpful!

6PPD: precursor to 6PPD-Quinone

- 6PPD is added to nearly all tires to prevent degradation of rubber—it's highly reactive by design
 - 6PPD is toxic to algae
 - "used to protect the rubber in transmission belts, hoses, automotive mounts and bushings, and other mechanical products" (26)
 - Relatively short half-life in water, 2.9-6.8 hours

- Combines with oxygen to create 6PPDQ
 - Half life in water unknown, estimated to be longer than 6PPD
- Every American generates around 10lbs of tire ware particles every year! (26)

6PPD-Quinones

Figure 2: Reaction of 6PPD with ozone (O3) to produce 6PPD-quinone.

Image: (26)

- One of the most deadly chemicals in roadway runoff (23; 24).
- Has been linked to the observed sudden coho death in the Puget Sound area (24)
 - Potentially caused by malfunction of the blood brain barrier (26)

- Salmonid toxicity
 - Coho
 - Coastal cutthroat trout
 - Steelhead
 - Chinook
 - Sockeye
 - Chum
- Sublethal effects
 - Eye development
 - Slower/less vigorous
 - More research needed
- LC₅₀=95 ng/L (Center for Urban Waters)
 - Results vary 40-100 ng/L

Anti-inflammatories: Ibuprofen and diclofenac

- Both considered biodegradable, BUT:
 - Not completely removed modern treatment systems
 - 'pseudo-persistent'(6)
- Inhibit prostaglandin synthesis
 - Prostaglandin causes inflammation in humans
 - In invertebrates prostaglandin effects:
 - Reproduction
 - Temperature control
 - Ion flux regulation (6)

 Ibuprofen shown to disrupt hormone-mediated metabolic pathways in the liver of bullfrog tadpoles (7)

PCPs: Caffeine and Cotinine

- Caffeine study on Zebra fish:
 - ≥ 0.0088 mg/L caused locomotion/acetylcholinesterase inhibition
 - ≥ 40 mg/L caused tail deformities
 - 100 mg/L caused edemas
 - Concentrations often found in natural environs (19)
- Caffeine increases growth in Pseudomonas bacteria
 - Aquarium developed oily sheen
 - Dramatically increases amount of ammonia
 - Ammonia is toxic to fish (20)

Image: shutterstock

- Cotinine study
 - 70-80% of nicotine is metabolized in humans into cotinine
 - Of that, 10-15% is not further metabolized and is instead excreted in urine
 - 100% of wastewater globally
 - concentrations between 0.06 µg/liter and 51 µg/liter
 - Toxic to frog embryos and rainbow trout hepatocytes
 - *"Nocardioides* sp. strain JQ2195, capable of degrading and utilizing cotinine as a sole carbon and nitrogen source" (21)

Pesticides:

- 2016—The global annual consumption of pesticides is around two million tons!
 - Europe accounts for 45 %,
 - USA accounts for 25 %
 - Other countries 25 % (27)

- Neonicotinoids *imidacloprid, clothianidin,* and *thiamethoxam*
 - Most widely used insecticide class in the world as of 2019 (25)
 - Seed treatment as prophylactic (25)
 - Negatively affect aquatic microorganism communities with as few as 1-15ppb (22)

Industrial Chemicals

- Bisphenol A (BPA)
 - Still used in many plastics' production
 - Plastic bottles, food storage containers, canned food cans, receipt paper, PVC
 - Found in humans' urine
 - Has been linked to human health problems:
 - ADHD, anxiety, depression, early puberty in girls, diabetes, obesity, and heart disease. (9)

Benzothiazoles: anticorrosion agents

- Added to copper, rubber, and other materials to slow breakdown; also cleaning detergents
- Produced en-masse
- Environmentally present worldwide
- Chemical structure keeps them persistent
- Inhibit production of RNA, proteins, and enzymes (8)

Minerals in ELECTRIC VEHICLES VS GAS CARS

Electric vehicles require a wider range of minerals for their motors and batteries compared to gas cars.

In fact, an EV can have 6 times more minerals than a gas car and be on average 340 kg heavier.

Photo credit: <u>https://biz.crast.net/evs-vs-gas-vehicles-what-are-cars-made-of/</u>

Potential Mitigations

- Mapping areas where mitigation is needed
- Bioswales/vegetated strips
 - Similar performance to filtration systems—removal of 85% of suspended solids (29)
- Permeable pavement
- Infiltration trenches
- Tire manufacturing practices??

NCWA: What we do and how you can help!

Riparian planting*

- Canyon Creek
- Blackberry Bog
- Temperature/Turbidity monitoring*
 - 24 sites throughout our service area
- Roadway Runoff Testing*
 - River TALC
- Nature Matters
 - Last Thursday each month at the Fort George Lovell Taproom
- Mapping*
 - Past, current, and future projects
- *Volunteer Opportunities*
