

Habitat Suitability Index (HSI) for Juvenile Chinook Salmon

Colors indicate suitable habitat, based on modeled velocity/temperature/depth predictions for various flow regimes.

-  Areas of suitable habitat for a high flow year (based on flow measured at Bonneville during 1999)
-  Areas of suitable habitat for a medium flow year (based on flow measured at Bonneville during 2000)
-  Areas of suitable habitat for a low flow year (based on flow measured at Bonneville during 2001)
