Direct benefits of habitat restoration on juvenile salmon: site-scale evaluation

NICHOLE SATHER, REGAN MCNATT, ADAM MARTIN-SCHWARZE, KAILAN MACKERETH, HEIDI STEWART, SUSAN HINTON, GARY JOHNSON

Pacific Northwest National Laboratory, Coastal Science Division

NOAA Fisheries, Northwest Fisheries Science Center

2018 Columbia River Estuary Conference

Conceptual model: Prey production in restored tidal wetlands benefit juvenile salmon directly onsite and indirectly offsite

Direct benefits: Restored tidal wetlands provide refuge and prey resources for juvenile salmon (site-scale)

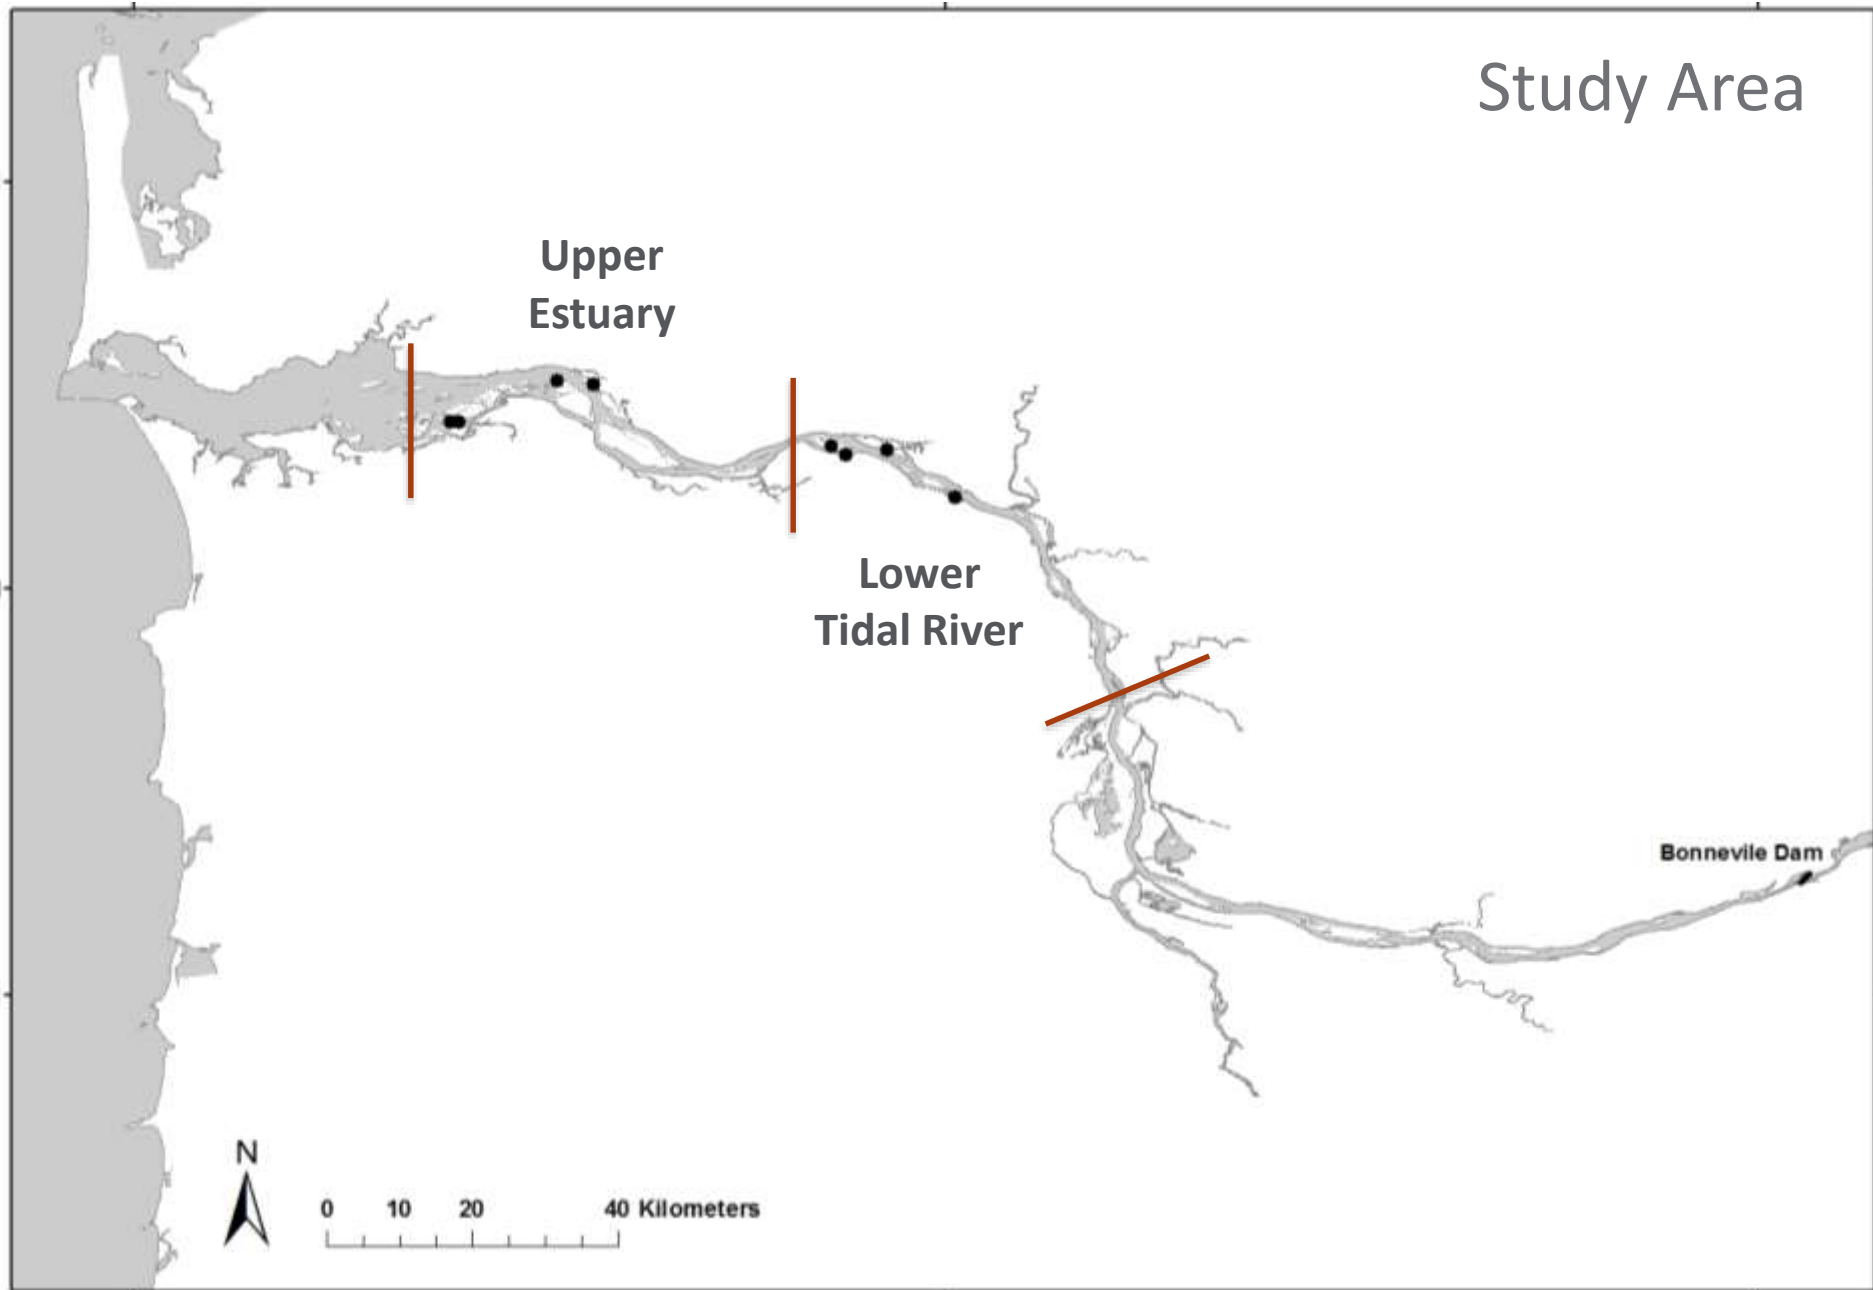

Flux: Quantifying prey exported from tidal wetland restoration site to mainstem

Indirect benefits: Restored tidal wetlands export material that support mainstem foodwebs (landscape-scale)

PIT antenna: Tagged salmon detected entering restored tidal wetlands

Native and Non-native fish

Unmarked Chinook Salmon

Genetic Stock ID: Chinook salmon

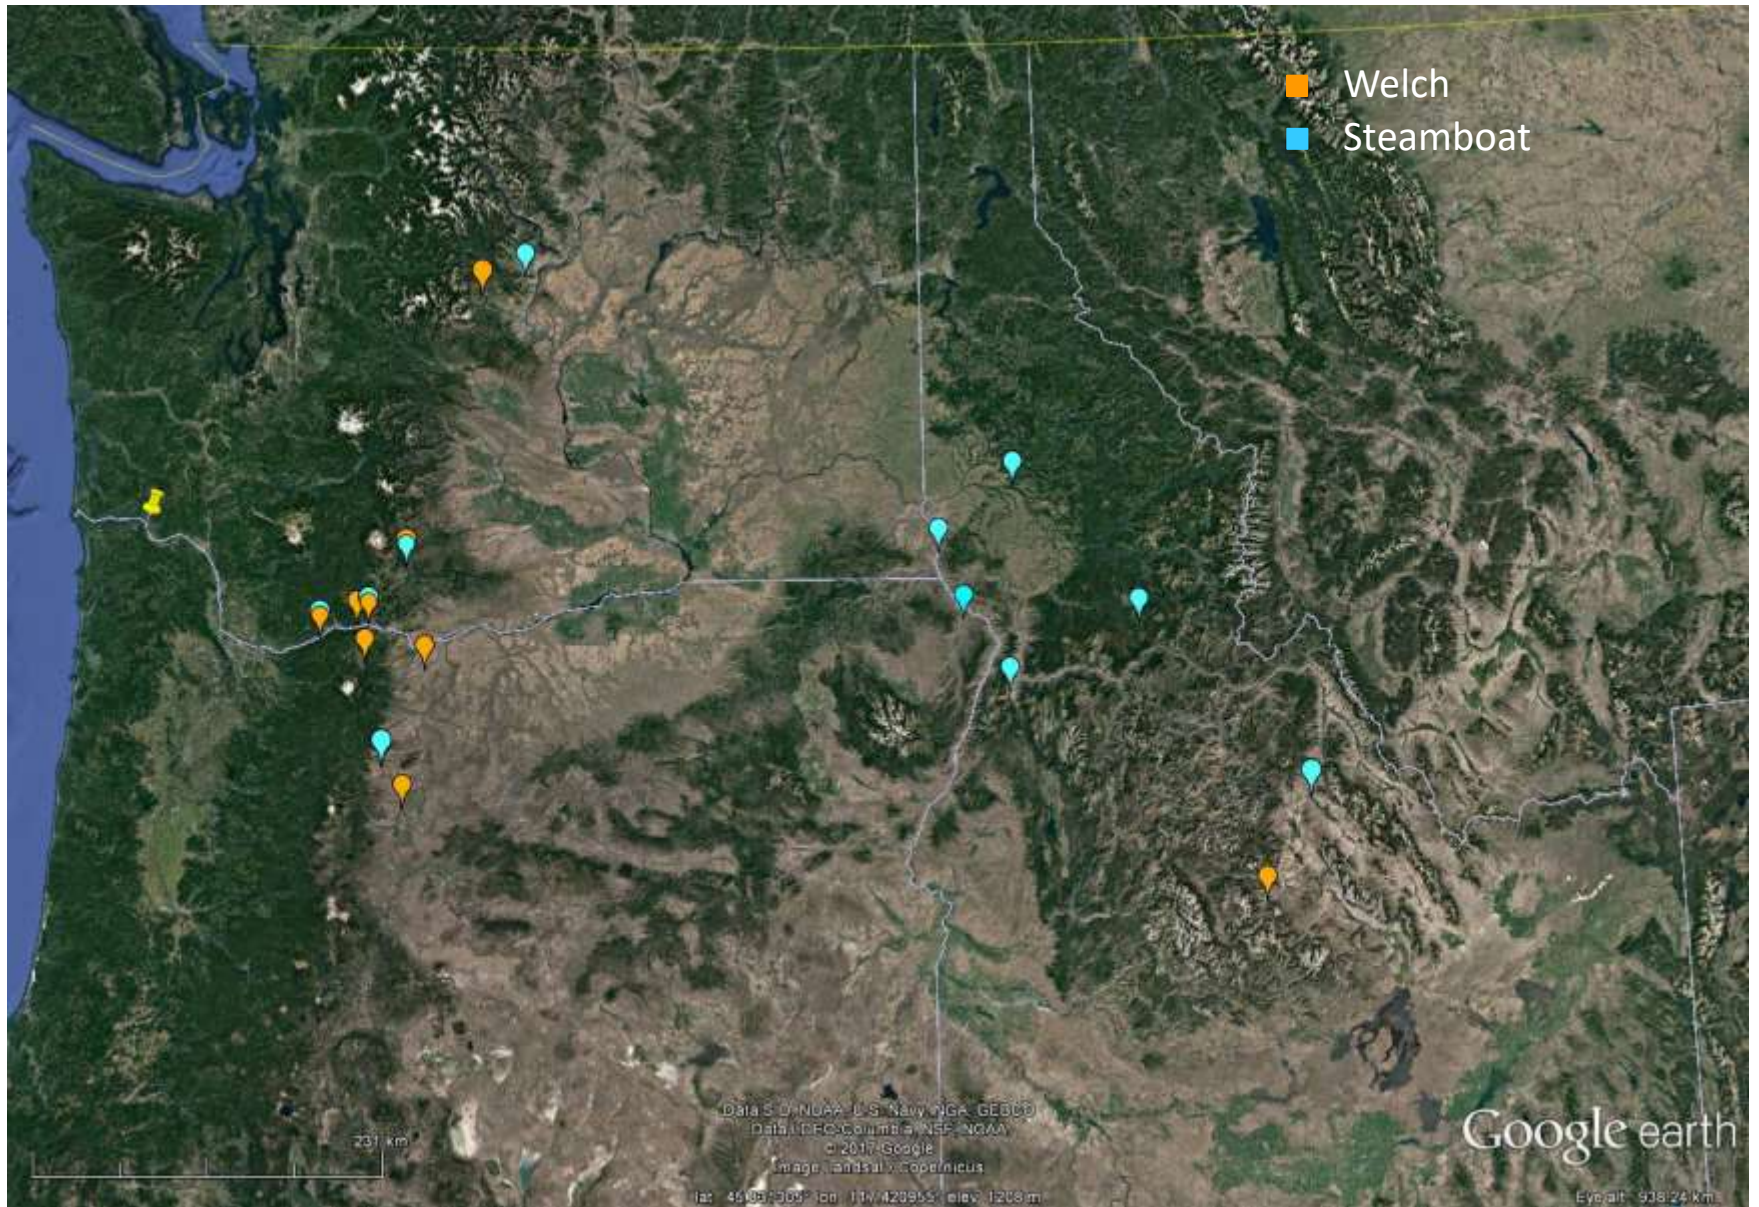

2016

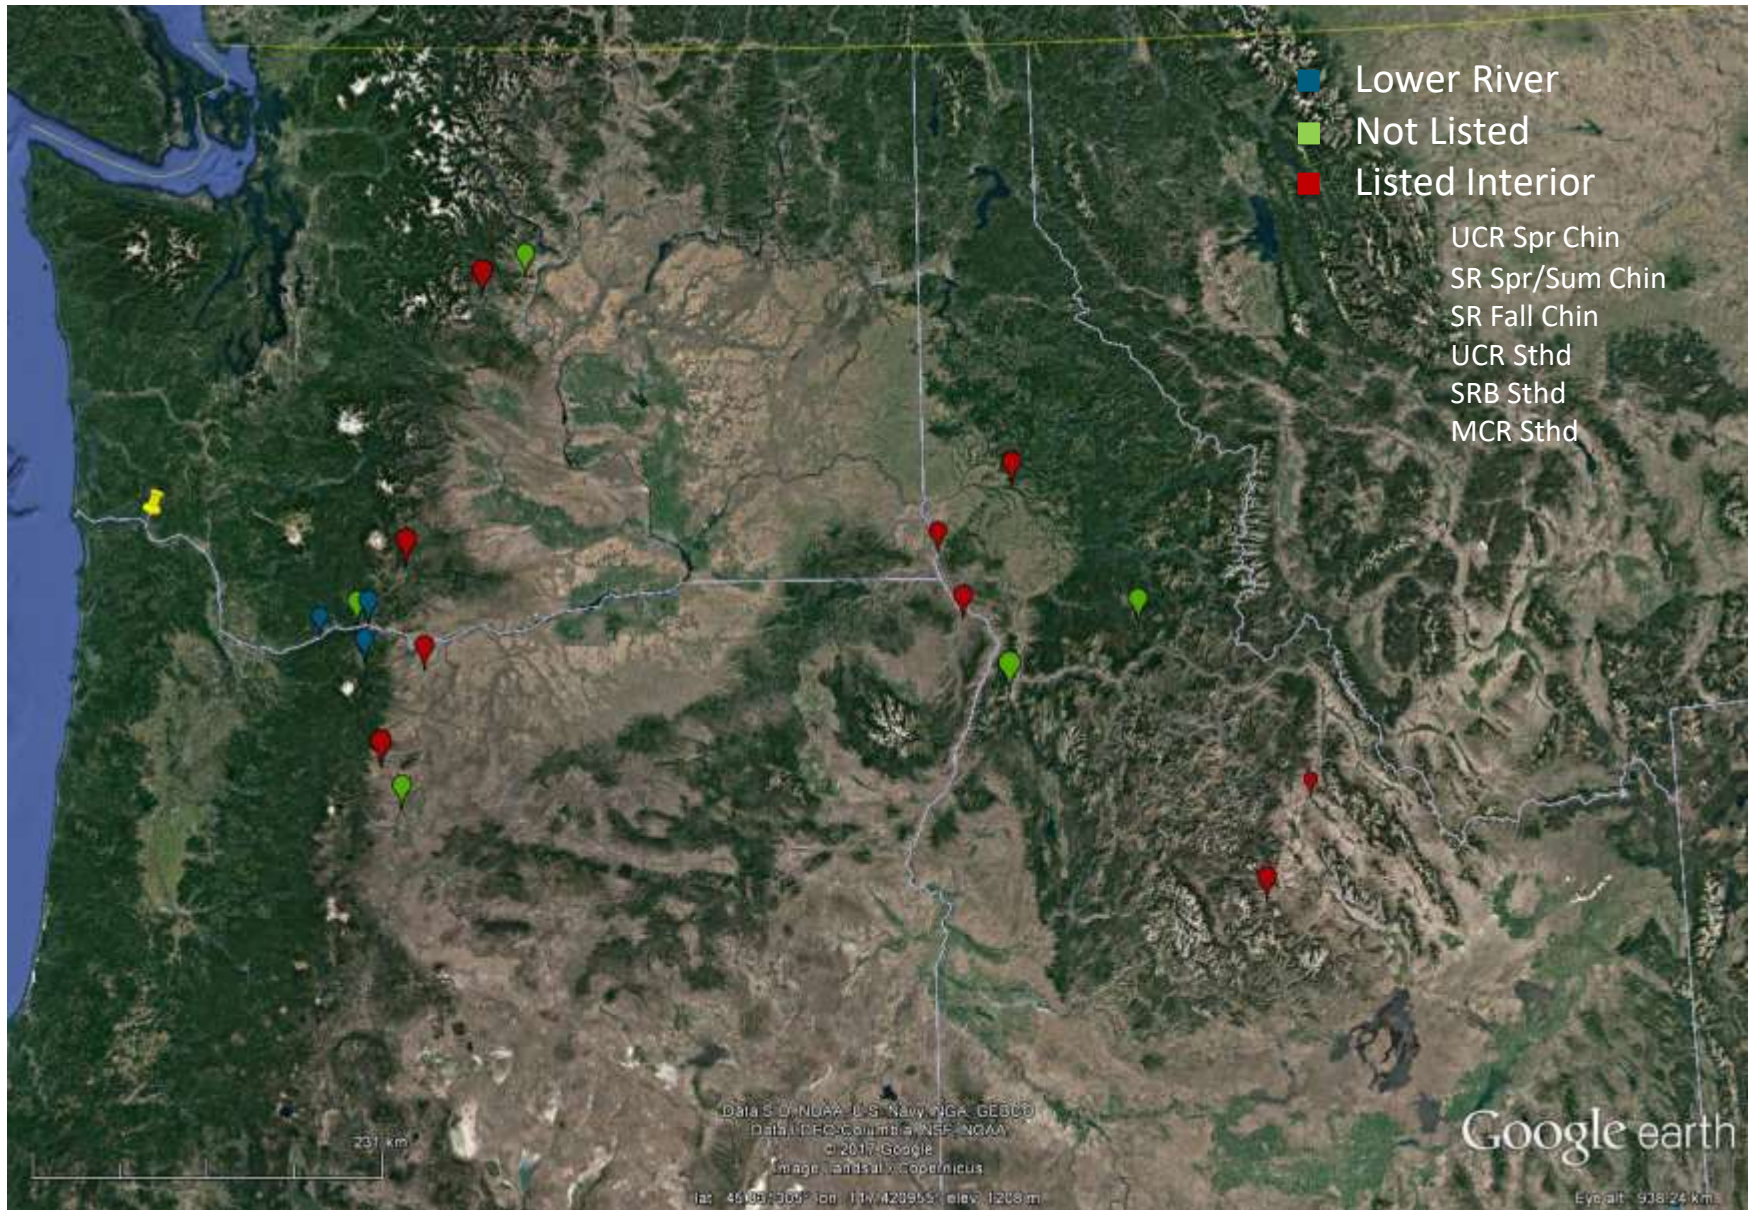

2017

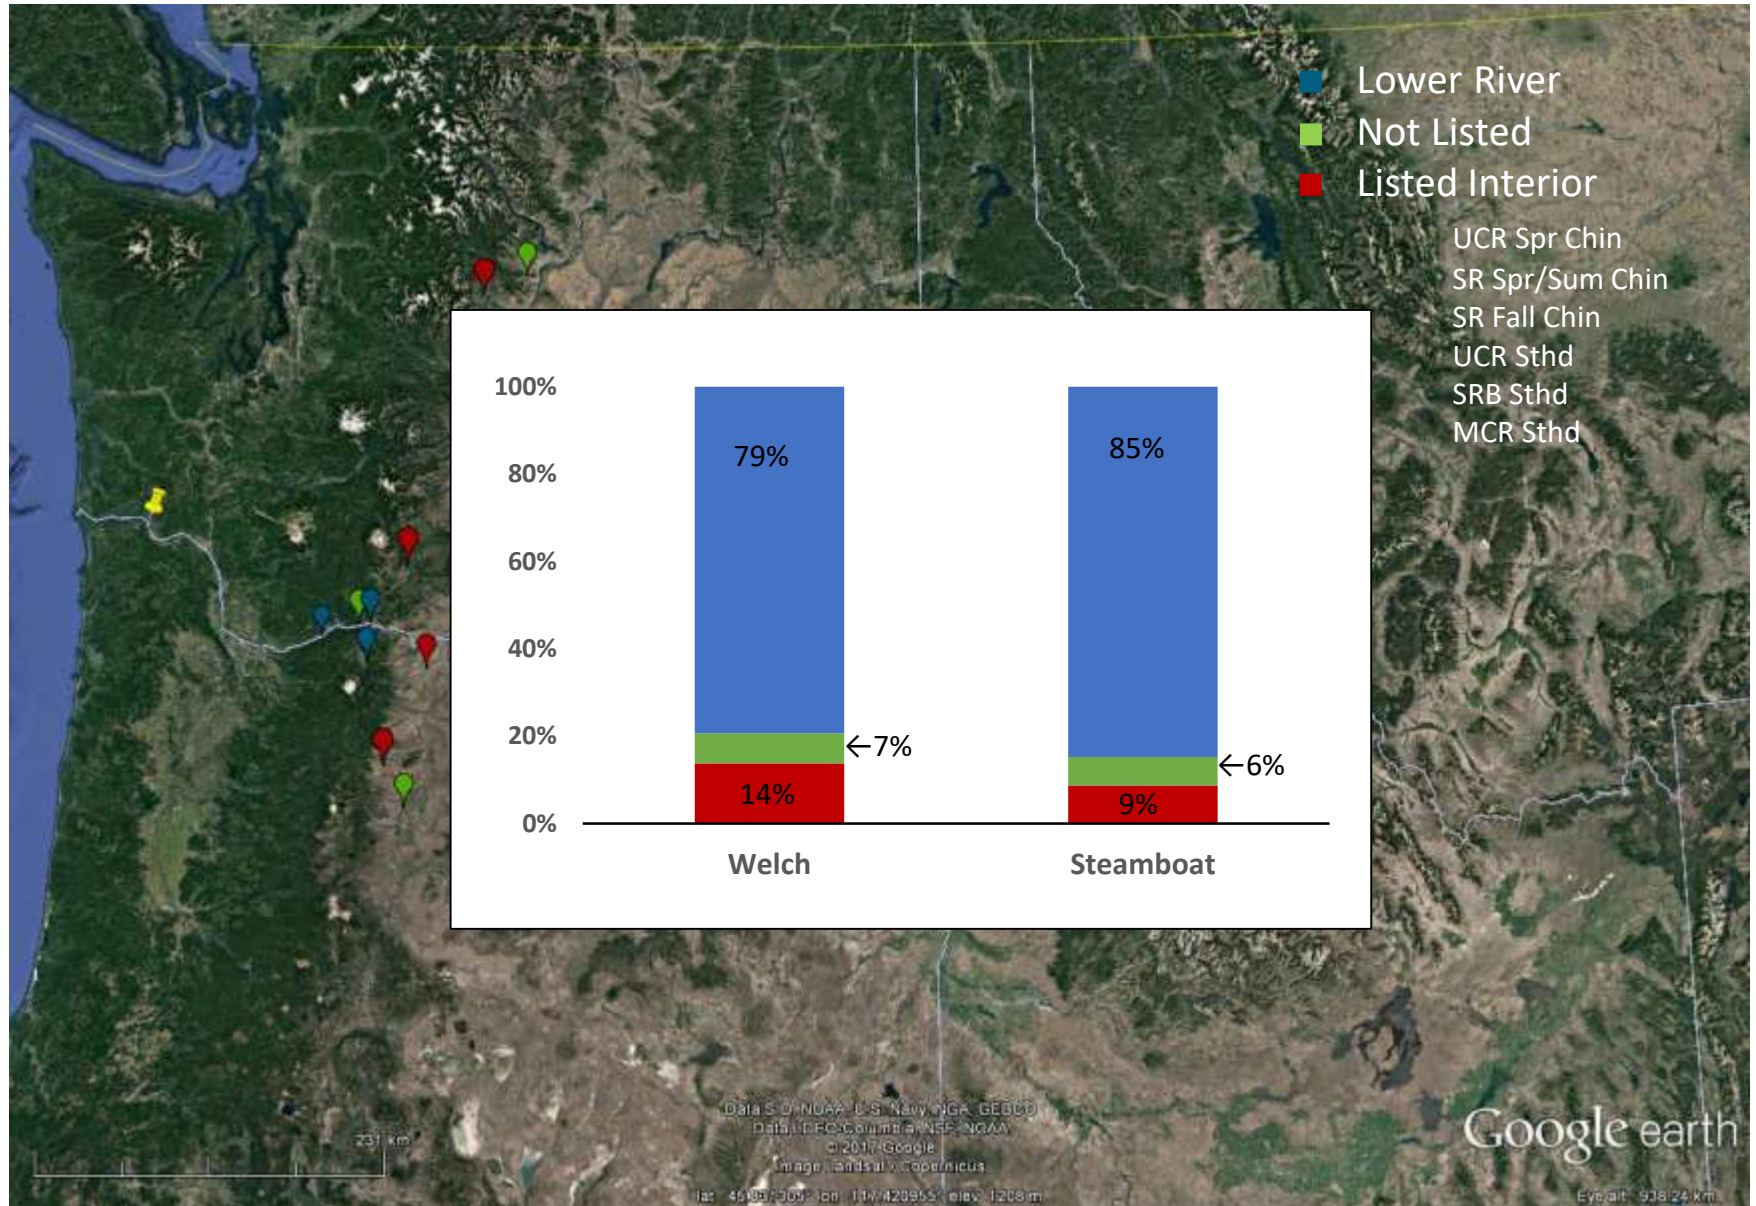

Geographic Origins

Genetic Stock

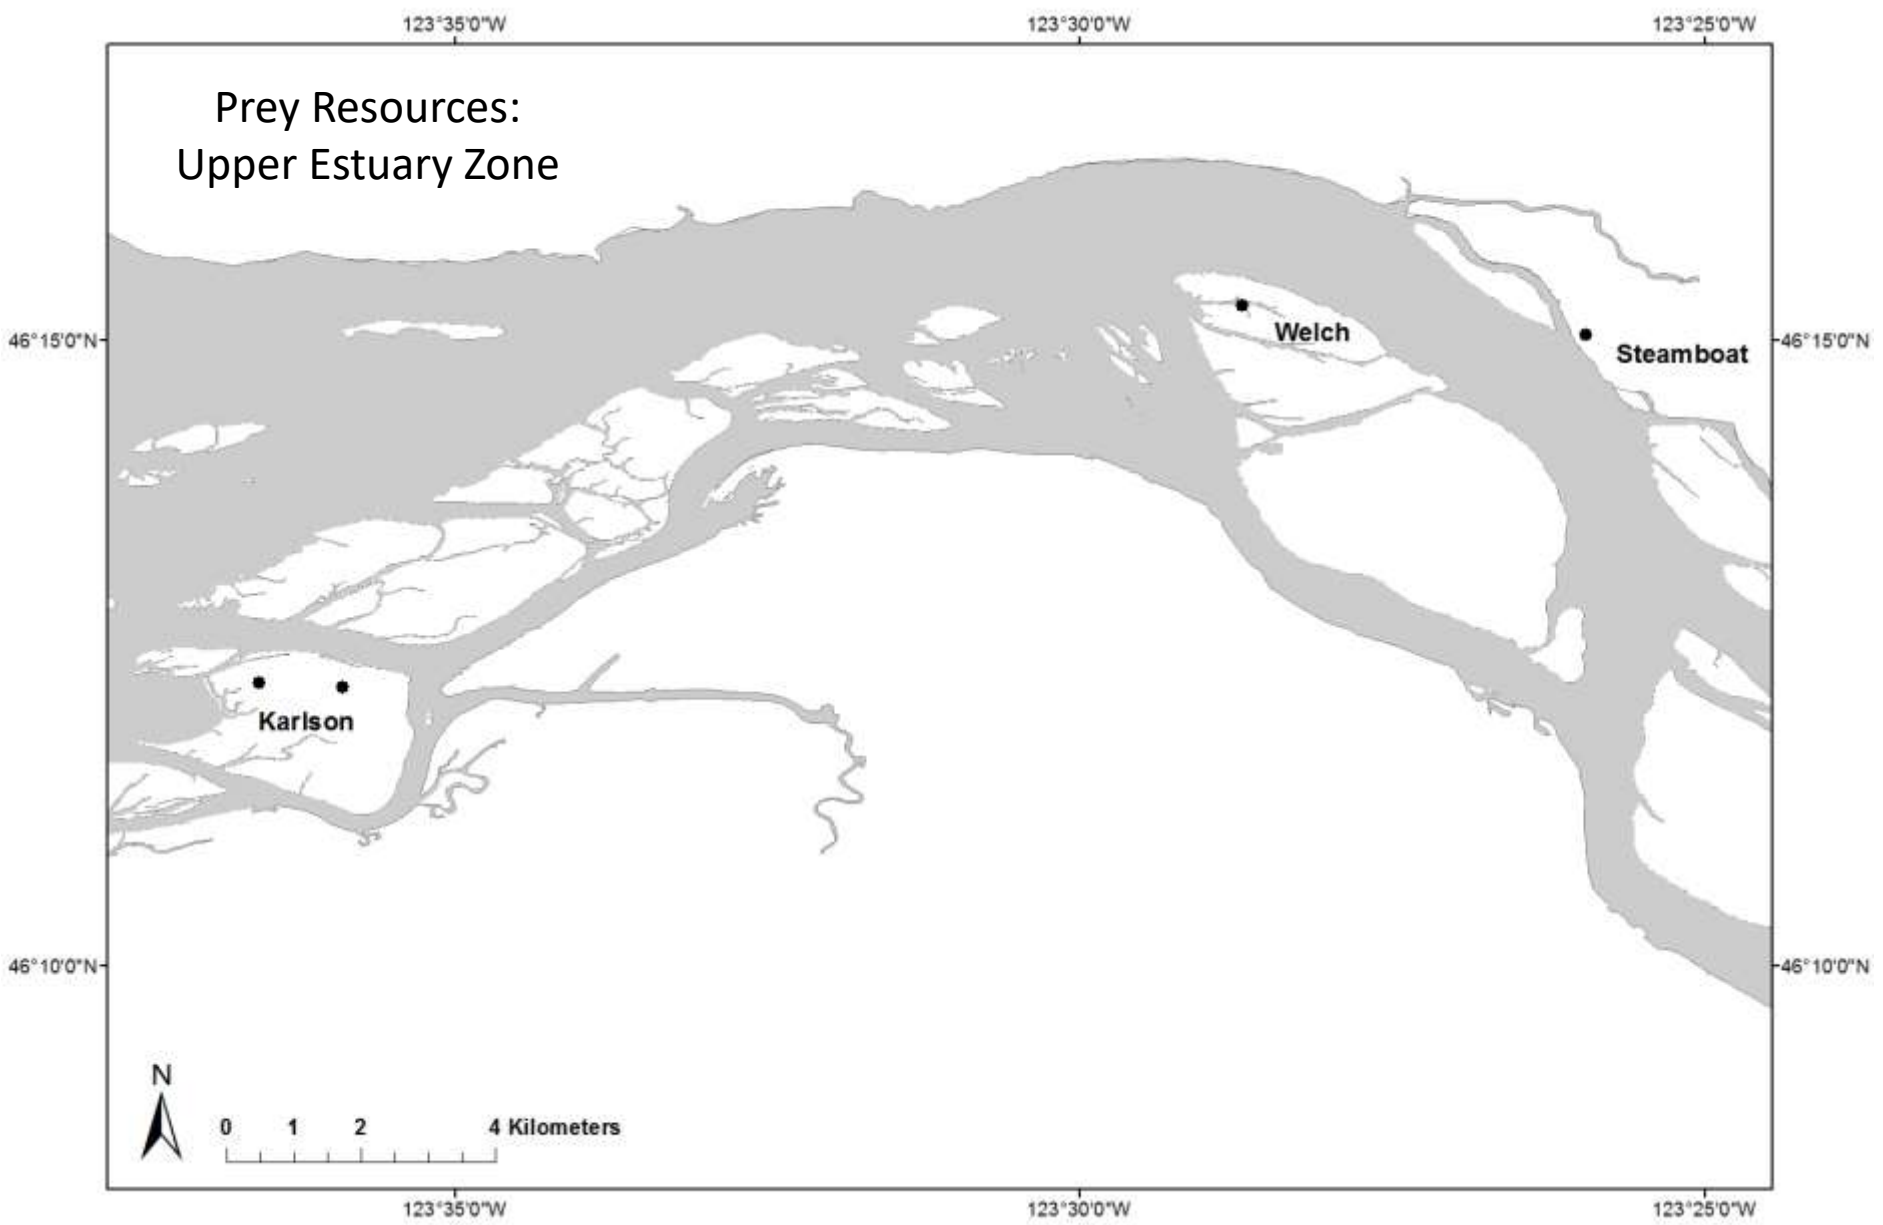

Classification of Detections

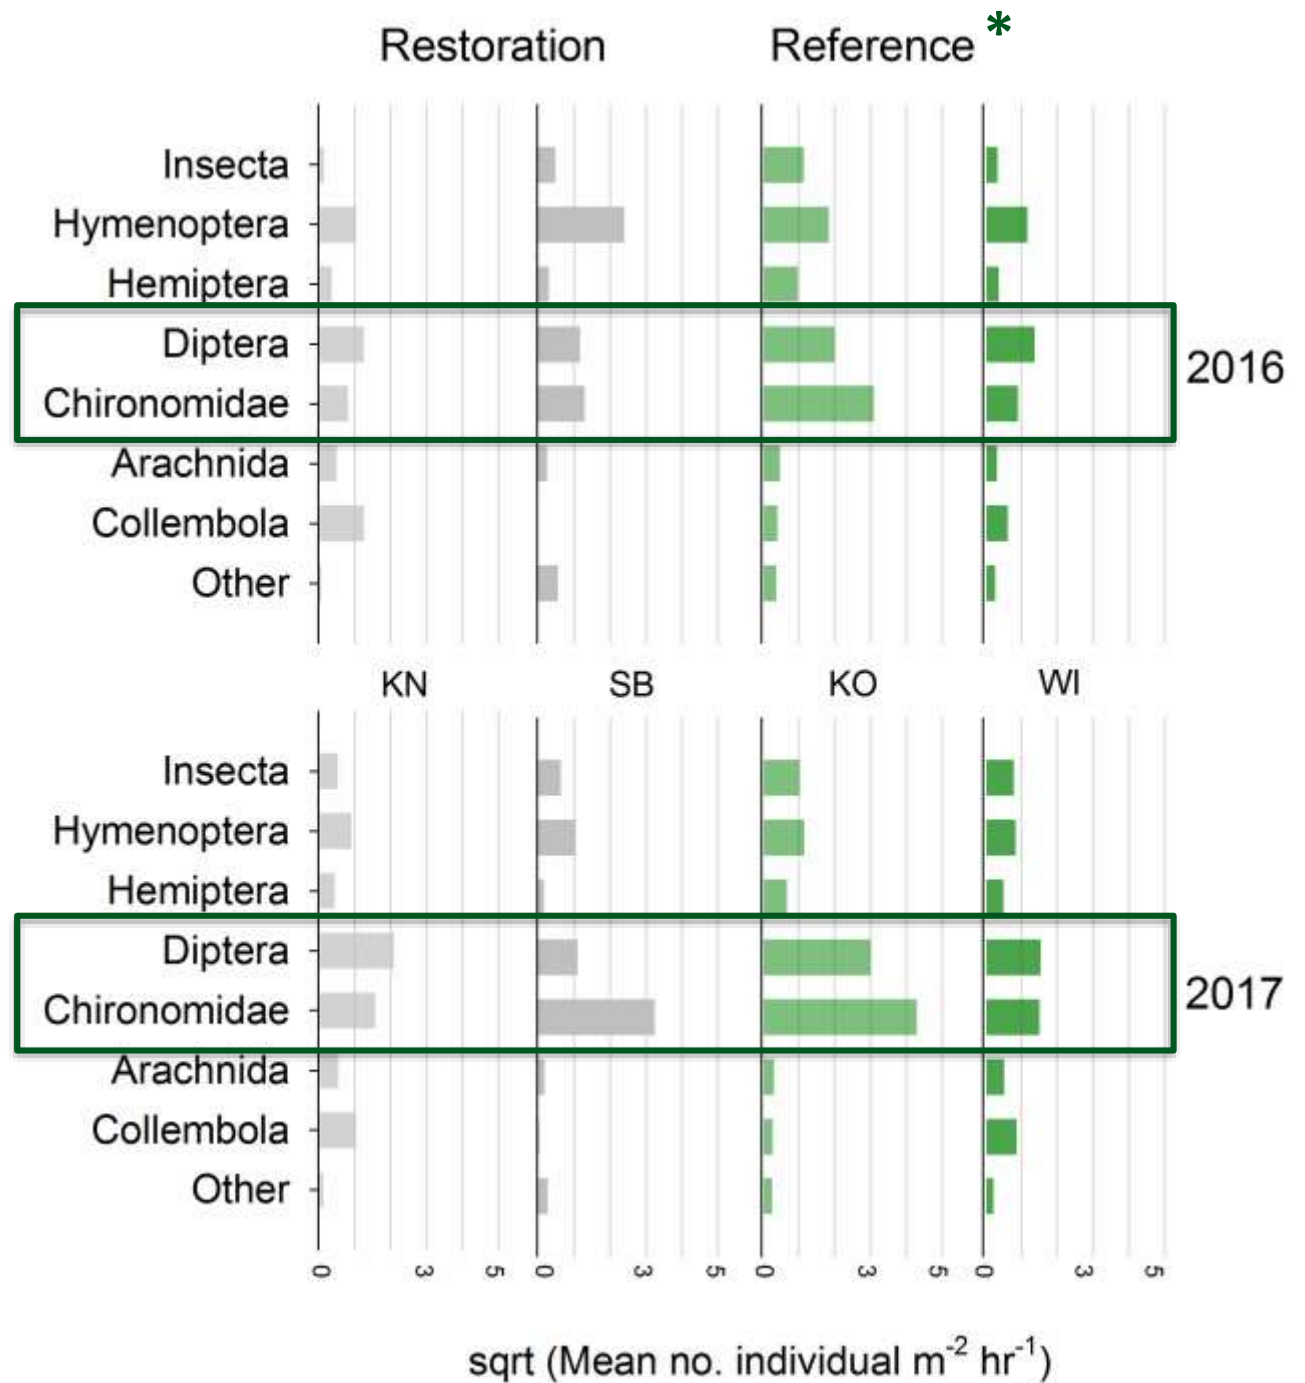

Detection Overview

	Unique detections	Fall Chinook	Spring Chinook	Steelhead	Northern Pikeminnow	“Orphans”
Welch	33	23	1	5	1	3
Max residence		13.4 d	10 m	1.3 d	0	20.9 d
Median residence		1.2 d		2 s		12 m
Steamboat	57	40	4	5	5	3
Max residence		21.6 d	1.8 h	1.0 d	106.7 d	23.5 d
Median residence		3.5 d	11 s	30 m	1.5 m	5 m

Prey Resources: Upper Estuary Zone

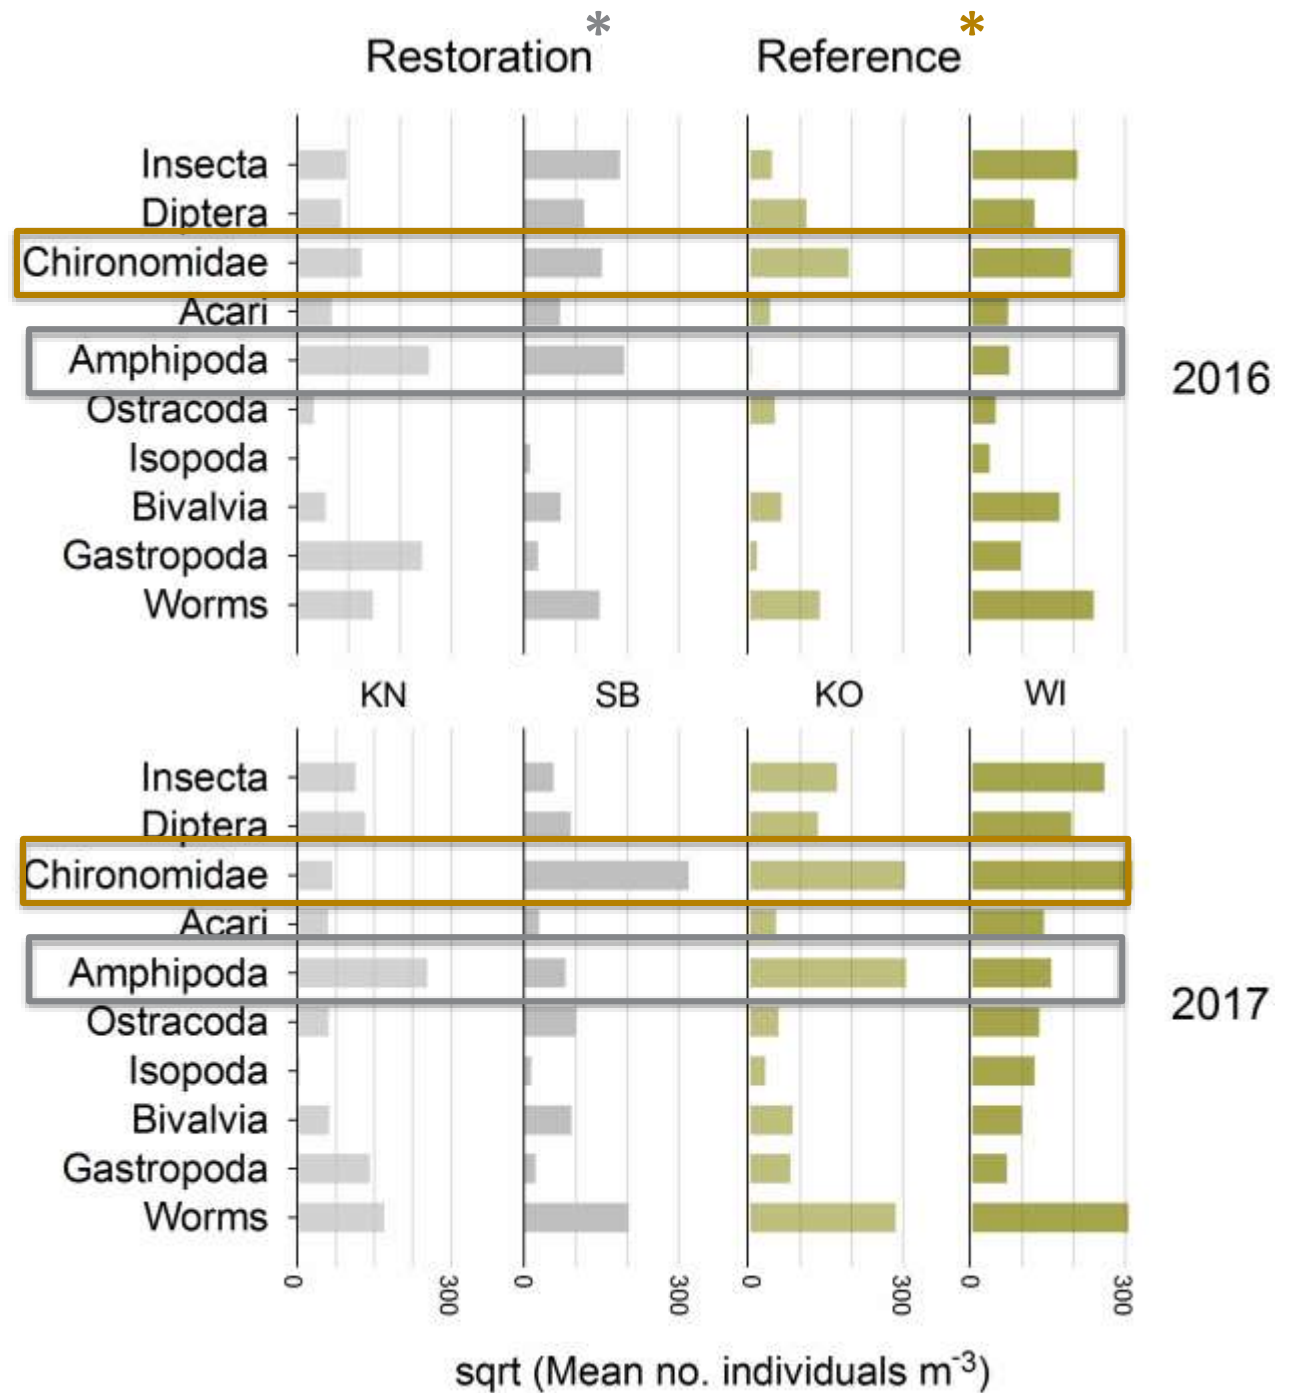

Salmon Prey: Marsh surface

Salmon Prey: Water surface

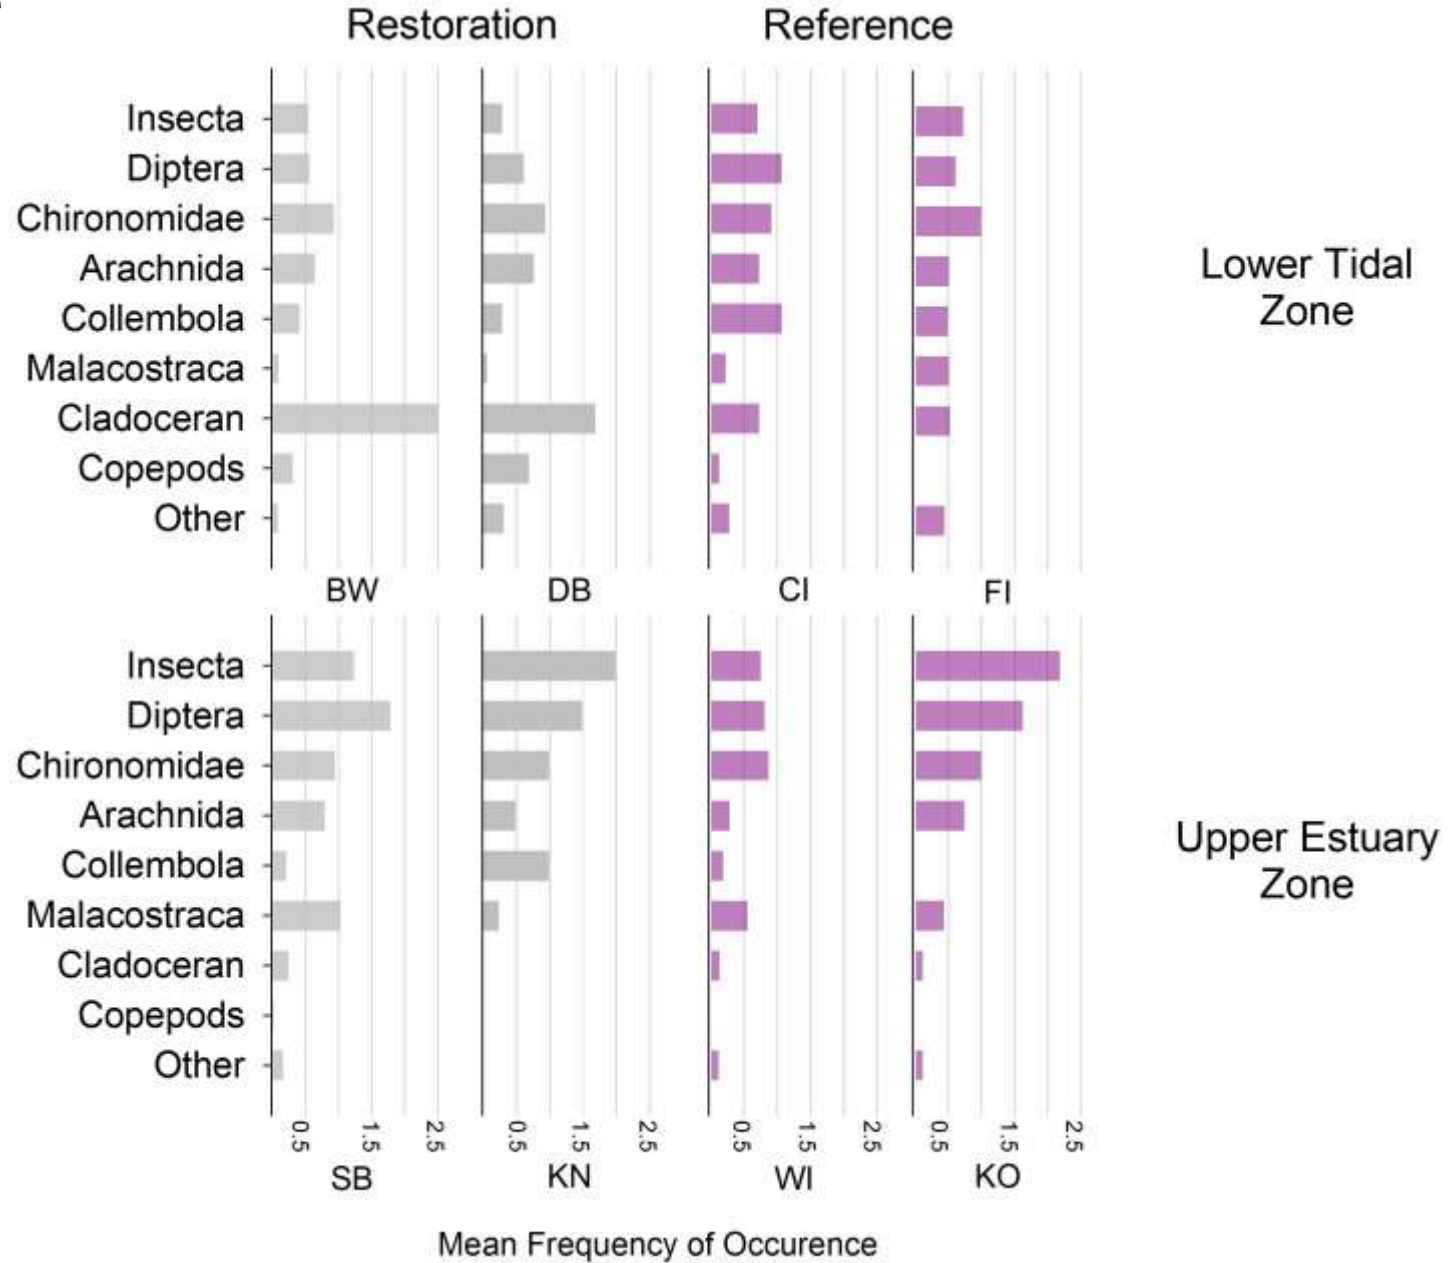

Salmon Prey: Benthos

Salmon Diet and Energy

Salmon Diet

Salmon Diet: Energy Content

Salmon Diet: Energy Content

AEMR Summary

- Juvenile salmon are using restored tidal wetland channels
- Wetlands are used by salmon from locations throughout the Columbia River basin.
 - **Interior stocks enter and use restored wetland channels**
- Restoration sites produce prey resources
 - Common salmon prey items were on average more abundant at reference sites
- The energy derived from prey resources at restoration sites was similar to energy consumed in reference sites
- Position within the landscape is an important consideration for CEERP
 - Non-native species
 - Density of Chinook salmon
 - Salmon diets
- **Interactions --> complex relationships**

Next Steps

- ▶ Lab and Data analyses
 - Gut contents, stable isotopes of fish and prey
 - Environmental variables: water surface elevation and temperature
 - Integration
- ▶ Reporting
 - AEMR findings available in the SM2
 - AEMR integration report
